1 Safety precautions and applicational limitations

- **Before** using the Repeater Plus for the first time, please read the complete operating manual.
- The Repeater Plus is a functional unit only after a Combitip Plus has been inserted.
- When inserting Combitips, do **not** press the ejection key.
- When emptying the Combitip by pressing down the filling lever, always hold it vertically over a vessel to prevent splashing.
- Eject the Combitip only when the filling lever has been pushed down **completely**.
- Do not use the Repeater Plus with liquids which attack the materials ABS, ASA, PBT, PC, POM and PPS.
- It is **essential** to observe the limitations governing the stability of the materials of the Repeater Plus and to consider the chemical compatibility of the reagents used.
- To verify the suitability of the Repeater with regard to the application or the reagent used, please contact your Eppendorf distributor, Brinkmann Instruments, Inc.
- The recommended operating temperature for the Repeater is between +4 °C and +40 °C. Do not operate the device outside this temperature range.
- Do not allow **any** liquid to enter into the Repeater Plus.
- Please use only original Eppendorf accessories.

2 Design principle

(Please open the fold-out pages at the front and back of this manual)

The Repeater Plus forms a dispensing system for repetitive pipetting when used in conjunction with Eppendorf Combitip Plus Tips. A supply of liquid is aspirated into the Combitip Plus and then dispensed step by step.

The built-in electronics of the device automatically recognize

- the Combitip Plus inserted
- the position of the volume selection dial (Fig. 1–2)

and the current pipetting volume appears in the display.

Using the volume selection dial, 20 different volumes can be selected for each Combitip Plus (dial setting: 0.5..1.....10).

The smallest pipetting volume of each Combitip Plus Tip can be dispensed a maximum of 100 times. The largest pipetting volume can be dispensed a maximum of 5 times (see table on page 18).

Note: Detailed operating instructions can be found in Section 4, "Operation".

Inserting the Combitip Plus Tip

- See Fig. 3.

Filling the Combitip Plus Tip

- Immerse the tip of the Combitip Plus into the liquid.
- Slide the filling lever slowly upwards (Fig. 1–6).

Pipetting

- Press down the pipetting lever (Fig. 1–5).
- ***The first stroke must be discarded.***

Ejecting the Combitip Plus

- Slide the filling lever down to the lowest position.
- Press both ejection keys simultaneously (Fig. 1–7).

3 Technical data

	Systematic measurement deviation (Inaccuracy)	Random measurement deviation (Imprecision; CV)
Combitip Plus 0.1 mL (beige piston)		
2 µL	±1.6 %	≤ 3.0 %
20 µL	± 1.0 %	≤ 2.0 %
Combitip Plus 0.2 mL (blue piston)		
4 µL	± 1.3 %	≤ 2.0 %
40 µL	± 0.8 %	≤ 1.5 %
Combitip Plus 0.5 mL		
10 µL	± 0.9 %	≤ 1.5 %
100 µL	± 0.8 %	≤ 0.6 %
Combitip Plus 1 mL		
20 µL	± 0.9 %	≤ 0.9 %
200 µL	± 0.6 %	≤ 0.4 %
Combitip Plus 2.5 mL		
50 µL	± 0.8 %	≤ 0.8 %
500 µL	± 0.5 %	≤ 0.3 %
Combitip Plus 5 mL		
100 µL	± 0.6 %	≤ 0.6 %
1000 µL	± 0.5 %	≤ 0.25 %
Combitip Plus 10 mL		
200 µL	± 0.5 %	≤ 0.6 %
2000 µL	± 0.5 %	≤ 0.25 %
Combitip Plus 25 mL		
500 µL	± 0.4 %	≤ 0.6 %
5000 µL	± 0.3 %	≤ 0.25 %
Combitip Plus 50 mL		
1000 µL	± 0.3 %	≤ 0.5 %
10000 µL	± 0.3 %	≤ 0.25 %

Test conditions in accordance with ISO 8655

Liquid: Bidistilled water, degassed in accordance with DAB

Reference temperature: 15 – 30 °C, constant to ± 0.5 °C, with Original Eppendorf Combitip Plus Tips

Technical specifications subject to change!

4 Mode of operation

(Please open the fold-out cover at the front and back of this manual)

4.1 Combitip Plus Tip

The Repeater® Plus does not become a functional dispensing unit until a Combitip® Plus Tip has been inserted.

Combitip Plus Tips can also be used in the original Repeater Pipette, Model 4780.

Nine different Combitip Plus Tip sizes are available (see the volume table on the next page).

An adapter must be used to insert 25 mL and 50 mL Combitip Plus Tip. The adapter is connected to the Combitip Plus Tip using a bayonet joint before the Combitip Plus is inserted into the Repeater. This adapter is reusable.

4.2 Operation

Selecting the Combitip Plus Tip

- The volume table on the next page can be used for the selection of volumes and of Combitips Plus.
- The volume which appears in the digital display (Fig. 1–4) is obtained from the position of the volume selection dial (Fig. 1–2) and the size of the Combitip Plus.
The Repeater Plus can be used even in the event of an electronics failure or when the battery is run-down (see "Notes" on page 20).
- The desired volume can be set rapidly by turning the volume setting dial (Fig. 1–1). The volume setting dial must click firmly into the position selected. The maximum setting for the volume selection dial is position 10.

Note: When position 10/position 0.5 has been reached, do **not** rotate the volume setting dial beyond these positions. Rotate the volume setting dial in the other direction.

Volume table for using Combitip® Plus Tips with the Repeater® Plus:

(The positions and dispensing steps which are marked in red are based on Combitip Plus Tips used with the Repeater, Model 4780)

Position of the volume selection dial (Fig. 1-2):

0.5	1/1	1.5	2/2	2.5	3/3	3.5	4/4	4.5	5/5	5.5	6	6.5	7	7.5	8	8.5	9	9.5	10
-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	---	-----	---	-----	---	-----	---	-----	----

Maximum number of dispensing steps:

100	50/48	33	25/23	20	16/15	14	12/11	11	10/8	9	8	7	7	7	6	6	5	5	5
-----	-------	----	-------	----	-------	----	-------	----	------	---	---	---	---	---	---	---	---	---	---

Combitip Plus with the following volumes:

0.1 ml	1µl	2µl	3µl	4µl	5µl	6µl	7µl	8µl	9µl	10µl	11µl	12µl	13µl	14µl	15µl	16µl	17µl	18µl	19µl	20µl
0.2 ml	2µl	4µl	6µl	8µl	10µl	12µl	14µl	16µl	18µl	20µl	22µl	24µl	26µl	28µl	30µl	32µl	34µl	36µl	38µl	40µl
0.5 ml	5µl	10µl	15µl	20µl	25µl	30µl	35µl	40µl	45µl	50µl	55µl	60µl	65µl	70µl	75µl	80µl	85µl	90µl	95µl	100µl

* 25 mL and 50 mL Combitips Plus must be used with the supplied adapter.

Inserting the Combitip Plus Tip

- Push the filling lever down **completely** and hold down (see Fig. 3).
Reminder: *Do not press ejection keys* while inserting tip.
- Push the Combitip Plus Tip into the Repeater Plus from below. The Combitip Plus will click into place.
- When inserting a Combitip Plus directly from the rack (see Fig. 4), push the filling lever down **completely** and hold down.

The volume which would be dispensed in accordance with the size of Combitip Plus inserted and the position of the volume selection dial appears in the display.

- Select the volume by turning the dial.
The volume selected appears in the display.

Note: When small volumes are set (position 4, 5 or lower), the operating path of the pipetting lever is reduced automatically. Rotating the selection dial alters the position of the pipetting lever, which reduces the amount of strain placed on the thumb during dispensing.

Filling the Combitip Plus Tip

- Immerse the tip of the Combitip Plus into the liquid. Slide the filling lever **slowly** upwards to the stop (Fig. 1–6).
The display flashes, which means that the Repeater Plus is **not yet ready for operation!**

The first dispensing step must be discarded.

This first step is independent of the position of the dial. It is not a measured volume and prepares the system for the dispensing series to follow:

- Before executing the first stroke, wipe the tip with fiber-free material and hold it against the inside of a vessel.
- Press the pipetting lever once (Fig. 1–5) and discard the liquid.
- The display stops flashing and shows the pipetting volume.

The Repeater Plus is now ready for operation.

The full number of dispensing steps are now available.

Pipetting

- Hold the tip of the Combitip Plus against the inside of a vessel.
Execute the stroke of the pipetting lever (Fig. 1–5).

If there is not enough liquid to pipette the volume selected for the last dispensing step, the residual stroke lock prevents an insufficient amount from being pipetted.

After the Combitip has been refilled, please discard the first step (see page 19)!

Ejecting the Combitip Plus Tip

When the Combitip Plus is ejected, the filling lever **must** be in the lowest position:

- Hold the Combitip over vessel and empty the rest of the liquid by sliding down the filling lever into the lowest position.
- Hold the Repeater Plus over a vessel.
- Press both ejection keys simultaneously (Fig. 1–7).
The Combitip Plus (25 mL and 50 mL Combitip Plus includes adapter) is released automatically from the Repeater Plus.
The display is no longer lit up.
- For 25 mL and 50 mL Combitips:
Unscrew the reusable adapter from the combitip and store in a safe place.

Notes

Filling the Combitip Plus Tip

- The filling lever should be pushed upwards slowly and smoothly.
Failure to do so can result in excessive vacuum, which can cause tiny bubbles to accumulate in the liquid and thus lead to pipetting inaccuracies.
If a large air bubble enters 10, 25 and 50 mL Combitips Plus, drips may form after every dispensing step when the volume dial is set to > 5.
- A small air bubble in the upper cylinder has no effect on dispensing accuracy.
- If the Combitip Plus is not filled completely, the display does not flash. In this case, the **first volume which is pipetted** must be discarded before the actual dispensing process begins.

Setting the volume in the event of an electronics failure or run-down battery

- The volume setting dial has 20 positions. Positions 1–10 are denoted by figures. The intermediate positions (as well as position 0.5) are indicated by a dot (•).
- The correct position of the dial is obtained by dividing the desired volume by the volume for position 1, which is printed on the Combitip Plus (see Fig. 2–1: "1= . . µL").

Example for the 5 mL Combitip:

- Volume for position 1: 100 µL
- Desired pipetting volume: 200 µL
Calculation: $200 \div 100 = 2$
Position to be set: 2
- Desired dispensing volume: 750 µL
Calculation: $750 \div 100 = 7.5$
Position to be set: • between 7 and 8
- Desired pipetting volume: 50 µL
Calculation: $50 \div 100 = 0.5$
Position to be set: • in front of 1

4.3 Replacing the battery

- Open the battery compartment (Fig. 1–3) by sliding off the lid.
- Wipe the new battery with a soft, dry cloth and insert into the battery compartment, making sure that the positive pole and the labelling are facing upwards. Dispose of the old battery in accordance with environmental regulations.

If no new battery is available, it is possible to continue working with the Repeater Plus (volume setting: see above).

Battery lifetime: at least two years

When the battery symbol appears, it is possible to continue work supported by electronics for approximately two weeks.

5 Maintenance / Cleaning

The Repeater Plus can be cleaned using a soft cloth softened with soap solution or disinfected with 60 % isopropanol.

Do not allow any liquid to enter into the device.

If a problem cannot be eliminated with the aid of the recommendations in this manual (see Sec. 6), please return the Repeater Plus to your Eppendorf distributor, Brinkmann Instruments, Inc.

6 Troubleshooting

Error	Cause	Solution
Battery symbol appears.	– Battery is running down.	– Replace the battery within the next two weeks.
Display blank.	– No Combitip Plus has been inserted. – Battery is run down. – Battery has been inserted incorrectly. – Electronics are defective.	– Replace the Combitip Plus. – Insert a new battery (see Sec. 4.3). – Insert the battery correctly, making sure that the positive pole is visible. – Operation and volume selection are possible without the electronics (Sec. 4.2). – Send in the Repeater Plus for repair.
Air bubble increases in size; liquid cannot be aspirated.	– Combitip Plus is leaking.	– Replace the Combitip Plus.
Poor accuracy/precision values.	– Combitip Plus is leaking. – Liquid contains air bubbles. – Pipetting stroke has not been executed completely.	– Aspirate the liquid slowly and evenly. – Use degassed liquid. – Use the entire path of the pipetting lever.
Displays S 2	– Volume selection dial has not locked into position.	– Lock the volume selection dial into position.
Displays C 2 C 4 C 6	– Rim of the Combitip Plus barrel or the Combitip mounting of the Repeater Plus is not clean. – Combitip Plus is not positioned correctly in the mounting (i.e. is not straight). – Combitip sensor is defective.	– Wipe with a moist cloth or use a new Combitip Plus. – Insert the Combitip Plus correctly without touching the ejection key. – Send in the Repeater Plus for repair.
